

WHAT IS CLAIMED IS:

1 1. A video apparatus comprising:
2 a serial receiver for receiving, reproducing and
3 outputting a serially transmitted signal; and
4 a phase locked loop (PLL) for generating a
5 differential clock having a phase different from that of
6 said signal and a main clock having a phase different from
7 that of said signal and a frequency twice as much as that
8 of said differential clock on the basis of said signal
9 input from said serial receiver.

1 2. A video apparatus according to claim 1,
2 wherein the phase of said main clock is coincident with
3 that of said differential clock.

1 3. A video apparatus according to claim 2,
2 wherein said PLL is provided independently of a PLL
3 installed in said serial receiver.

1 4. A video apparatus according to claim 1,
2 wherein said signal is a horizontal synchronous signal.

1 5. A video apparatus according to claim 1,
2 wherein said signal is an Odd clock signal.

1 6. A video apparatus according to claim 1,
2 wherein said signal is an Even clock signal.
